

F06a conversion

F06a sends its texts in ASCII HEX. These text must be converted to ASCII to show the contents of the file that is sent. What do you have to do?

First you will have to remove the line numbers and CRC OK, and the info lines: [INFO] 110 blocks, 1 message(s)

So

```
[#1] 0000065100003030333236312e544c47 | CRC OK
```

will become

```
0000065100003030333236312e544c47
```

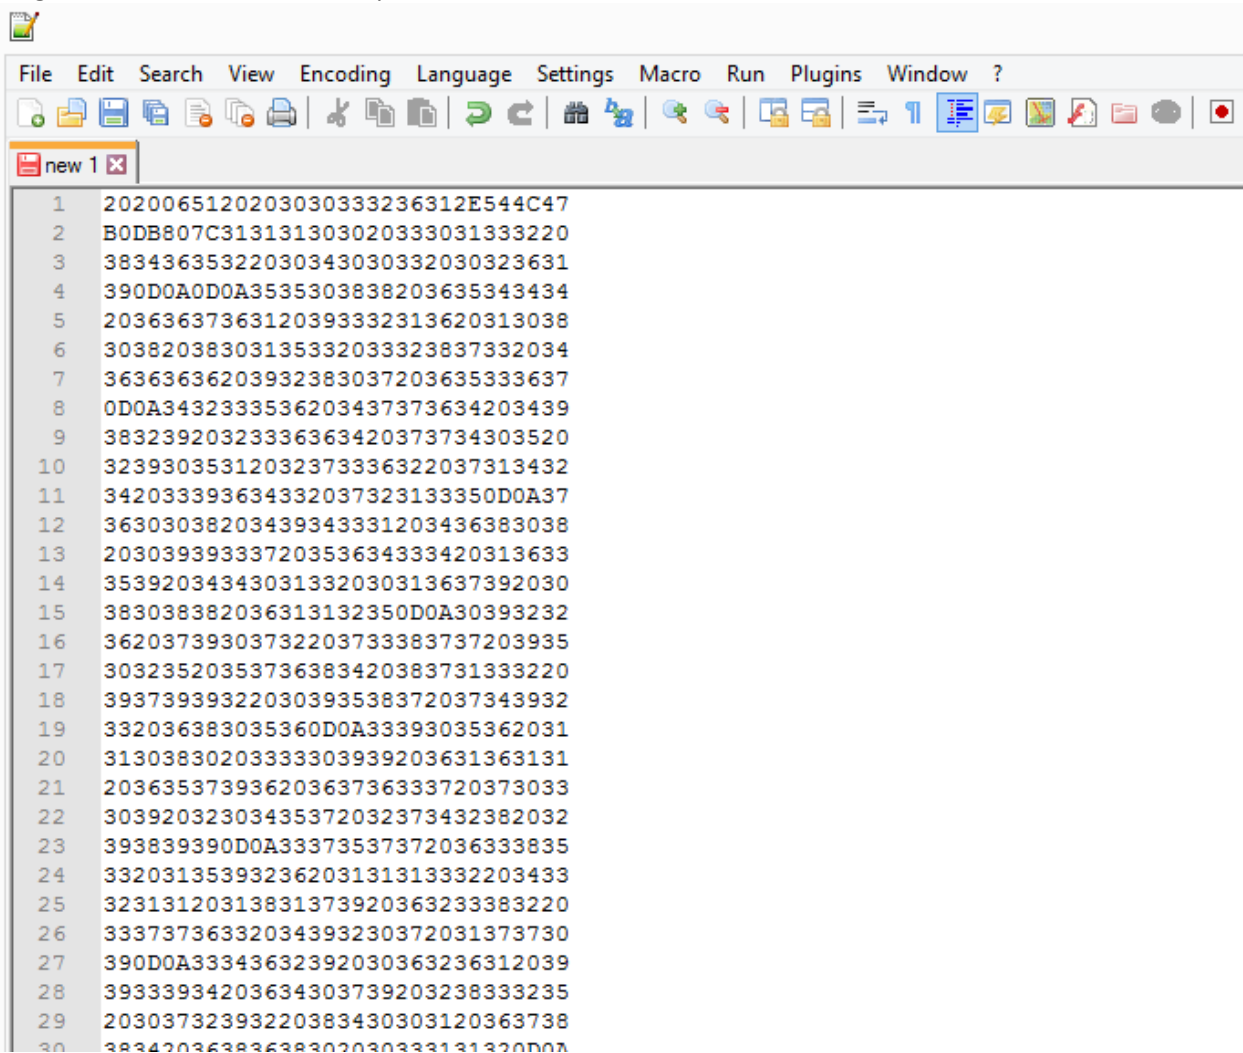

Then open <https://www.rapidtables.com/convert/number/hex-to-ascii.html> and copy paste the hex code into the “hex input” box. Click “convert” and you will see the ASCII text output in ASCII box.

A fine offline program that you can use is Notepad++ , a free program available here <https://notepad-plus-plus.org/>

Remove the line numbers and CRC OK, and the info lines: [INFO] 110 blocks, 1 message(s) .

Mark the text that should be converted. Click on Plugins, then HEX-ASCII and the converted text will appear.
